## Plans for next version:

- Implement use case 2: Zoom in on map to show charge stations in given area
- Include stops for recharging
- If destination is unreachable within range, prompt user
- Remind users that if charge station in use, they may need to account for this in trip duration
- User is notified of function failure if they do not allow our webpage to access their current location
- Map zooms to range of car/3 from location, to allow reaching destination and returning to charge, with a buffer.
- Account for traffic if data is available
- Allow users to create user profiles

## Team meetings:

- (2/6/16) Met for  $\sim$ 120 minutes, discussed what project we wanted to create and our plans for implementation
- (2/22/16) Met for ~100 minutes, discussed specifications and functionality for our project, created our use cases
- (3/12/16) Met for  $\sim 150$  minutes, began creating our project, worked on assignment 3
- (3/25/16) Met for  $\sim 100$  minutes, worked on our project, worked on assignment 4
- (4/2/16) Met for  $\sim 60$  minutes, worked on our project, worked on assignment 5
- (4/24/16) Met for  $\sim$ 300 minutes. Worked on our project, prepared for our presentation
- (4/25/16) Met for  $\sim$ 120 minutes. Finished up our project, fixed bugs that we found
